

CORPORATE INTRODUCTION

Subsea Riser Products is an ACTEON Group company that designs and supplies specialist riser hardware for critical offshore applications. Its range of targeted riser products is developed to offer improved performance, reduced cost, increased reliability and shorter supply schedules.

With a heritage of subsea and riser experience second to none, SRP provides practical and cost effective hardware solutions to meet the technical, cost, schedule and local-content challenges of your project.

SRP is flexible to use a number of proven manufacturing routes using international forgemasters, mills and machinists. When combined with a rigorous quality system we ensure SRP hardware meets the most demanding quality standards and helps you deliver your project scope successfully.

HIGH PRESSURE RISER

SRP has a range of specialist flange couplings, designed to provide long term structural integrity and sealing in extreme load and pressure applications without compromising speed of assembly. We offer both welded solutions as well as our proprietary SHRINK-FIT™ technology in this area.

SUBSEA CONNECTORS

SRP high strength subsea connectors use readily available materials and processes which, when coupled with their unique design, provide robust and reliable self locking connections that also offer wide angle articulation.

CRITICAL FORGED JOINTS

Tapered stress joints and tension joints are critical components demanding optimized design and manufacturing processes to deliver required quality. SRP has a proven ability to detail design and supply these specialist joints.

MARINE DRILLING RISER

SRP's quick make-up, light-weight marine drilling riser connection is designed to be safe and reliable. With a simple holistic design allowing optimal ancillary component performance it also facilitates the inspection and maintenance of the riser string.
